Bentonville, AR | Open to Relocation

PROFESSIONAL SUMMARY

Senior Software Engineer with 7 years of experience building scalable microservices, APIs, batch processing systems, and business-critical financial applications. Strong background in CI/CD, Kubernetes-based deployments, production support, monitoring, and troubleshooting high-availability systems. Hands-on experience with Docker, Kubernetes, Jenkins, GitHub, Kafka, Azure services, Prometheus, Grafana, Splunk, and Dynatrace. Expanding into AWS, Terraform, GitOps, and cloud infrastructure automation through hands-on DevOps projects.

TECHNICAL SKILLS

Cloud Platforms: AWS fundamentals, Azure Cloud Services, Azure Blob Storage

Containers & Orchestration: Docker, Kubernetes, Helm, Deployments, Services, Namespaces, Ingress, Probes

Infrastructure as Code: Terraform

Monitoring & Observability: Prometheus, Grafana, Alertmanager, Slack, Splunk, Dynatrace, OpenObserve

Programming & Scripting: Java, Bash, J2EE, REST APIs

Frameworks & Architecture: Spring Boot, Spring MVC, Spring Batch, Spring Kafka, Hibernate, Microservices, Saga Pattern

Messaging & Streaming: Apache Kafka, Azure EventHub, Kafka Connectors

Databases: MongoDB, Azure SQL, MySQL

Operations & Support: L3 Production Support, Troubleshooting, Root Cause Analysis, Agile/Scrum, SDLC

DEVOPS & CLOUD PROJECTS

Kubernetes GitOps Deployment Platform | Docker, Kubernetes, Helm, GitHub Actions, ArgoCD

- Built a containerized application deployment workflow using Docker, Kubernetes Deployments, Services, Namespaces, and Helm charts.
- Implemented GitHub Actions-based CI workflow and ArgoCD GitOps deployment flow to support automated application delivery across dev and prod environments.
- Configured readiness and liveness probes, Ingress-based application access, and troubleshooting workflows for deployment, service, and pod-level issues.

Monitoring & Alerting Stack | Prometheus, Grafana, Alertmanager, Slack

- Implemented Kubernetes monitoring using Prometheus for metrics collection and Grafana for workload and application visibility.
 - Configured Alertmanager routing with Slack notifications for service health and availability alerts.
 - Practiced incident-style troubleshooting using pod status, logs, metrics, probe failures, and alert behavior to improve operational response.
-

PROFESSIONAL EXPERIENCE

WALMART INC. | Senior Software Engineer | May 2020 – Aug 2025

- Led modernization of finance invoice and receipt matching systems by building scalable microservices, APIs, and batch processing workflows, improving processing performance and accuracy by 30% for complex multi-receipt scenarios.
- Designed and developed Spring Boot and Spring Cloud microservices to handle large-scale financial data flows across distributed systems, improving reliability, maintainability, and integration with downstream consumers.
- Built and maintained batch processing solutions using Spring Batch, Kafka, MongoDB, and Azure SQL, applying distributed system patterns such as Saga to support data consistency across services.
- Supported containerized application deployments using Docker, Kubernetes, Jenkins CI/CD pipelines, and canary deployment strategies to improve release reliability and reduce deployment risk.
- Monitored application and platform health using Grafana, Prometheus, Splunk, Dynatrace, OpenObserve, and internal alerting tools to identify performance bottlenecks, deployment issues, and production incidents.
- Provided L3 production support for business-critical applications, troubleshooting issues related to application performance, deployments, Kafka message flows, Kubernetes pod behavior, and database interactions.
- Optimized Kafka and Azure EventHub messaging workflows handling up to 1.3 million messages per day, improving throughput, reliability, and long-term data integrity.
- Improved database performance across MongoDB, Azure SQL, and MySQL by tuning queries, using aggregation strategies, and analyzing system behavior under production workloads.
- Automated operational workflows and data replication processes using Concord and alerting mechanisms, improving system visibility, team response time, and operational stability.

10BITS LLC | Software Developer | Jan 2020 – May 2020

- Developed and enhanced customer service applications using Java, Hibernate, MySQL, and RESTful APIs to improve system functionality and operational efficiency.
- Designed and implemented API endpoints for CRUD operations and SQL database interactions, supporting reliable backend services for business workflows.
- Improved existing Java/J2EE codebase using object-oriented programming principles, increasing maintainability and reducing technical debt.
- Built API documentation using Swagger and collaborated with cross-functional teams across planning, analysis, design, implementation, and support activities.
- Resolved user support issues and coordinated with stakeholders to deliver timely fixes and improve client satisfaction.

EDUCATION

NEW ENGLAND COLLEGE | Henniker, NH

M.S. in Computer Information Systems: Programming | GPA: 4.0
